The preservation method is mainly based on the types of food that need to be prepared or formulated. 1.3 Food Preservation. Low-temperature storage reduction of water activity decrease of oxygen increase of carbon dioxide acidification fermentation adding preservatives adding antioxidants control of pH freezing drying concentration surface coating structural modifications chemical modifications gas removal changes in phase transition hurdle technology. The steps of cleaning and sanitation are important in food preservation. Chemical disinfectants vary in their ability to kill microorganisms. Effectiveness depends on the types of microorganisms, their attachment mechanisms, and physical characteristics of the produce. Ice cleaning, preservation, and transportation at low temperature, stage fog etc. 2. The dry ice pelletizer is driven by a powerful hydraulic unit featuring instant push button start. 3. Fully automatic control of all temperature and dry ice snowing process guarantees continuous dry ice production without any supervision right from push button start. 4. The machine has passed CE and ISO.

Advantages of dry ice making machine: 1. PLC Omron - controls the complete process, injection and hydraulic Independent. performance - very constant production, independent of pressure and temperature. 2. Integrat
